

Hexagon heavy duty outdoor flooring

A Hexagon outdoor flooring is a re-installable, temporary paving slab ideal for quickly paving temporary parking lots, sidewalks, flat surfaces and event venues. Interlock tabs allow the elements to be easily interlocked to form a stable, continuous surface. Laying is simple, requiring only levelling and a layer of gravel.

Its sturdy construction can support the weight of cars and larger vehicles, its surface is non-slip, weather and chemical resistant and easy to clean. Available in black or green, it is made from recycled plastic, making it an environmentally friendly and reusable solution.

Made in Hungary
